Bedfont® has specialised in the design and manufacture of exhaled breath and gas monitoring instruments since 1976. For medical gas monitoring, our Medi-Gas Check medical pipeline testing range verifies not only the quantity but also quality of gas administered to patients. Our breath analysers include carbon monoxide (CO) monitors such as the Smokerlyzer®, used for smoking cessation, and the ToxCO®, used by emergency services, to screen for CO poisoning. The NObreath® FeNO monitor provides accurate analysis of airway inflammation for the control of asthma, and the Gastrolyzer® range aids in the detection of gastrointestinal disorders and food intolerances. Quick and non-invasive, breath analysis is the new blood test.
